## **Aluminum Deck Locker**

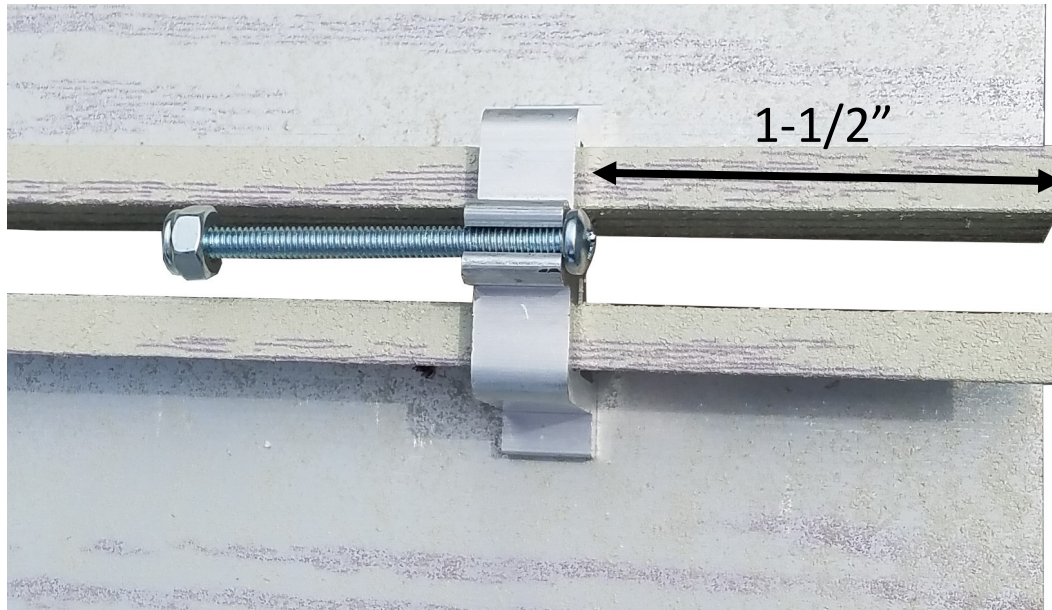

The Aluminum Deck Locker is sold in packs of four. Up to four lockers should be used per panel (two lockers per panel is adequate). The lockers use a #8 machine screw to lock the decking into the Patriot dock frame. The nylon lock nut should be threaded on the bolt shank just enough to contact the nylon insert.

The Aluminum Deck Locker is installed on the panel by aligning the deck locker between two board profiles and firmly press into place.

Slide Deck Locker at least 2" onto the aluminum deck panel, leaving approximately a 1-1/2" space from the edge of the panel to the outside edge of the Deck Locker.

After the deck panel has been set in place on the Patriot dock frame, reach under and push the machine screw into place underneath the aluminum angle of the dock frame.
